

THIS DEVICE "BE-FOUND" HAS BEEN DESIGNED TO WARN YOU BY BEEPING OF THE CONDITION OF THE SIGNAL RANGE AND THE BATTERY VOLTAGE WHEN IT BECOMES OUT OF ITS SAFETY LIMITS.

SPECIFICATION

- Dimension: 40X21X16mm(9.4grams)
- Normal Operation Voltage: 4.8~7.2Volts(Maximum Voltage: 10.0V)
- Power Consumption: 18mA(stand-by)65 μ A(while beeping)
- Operating Temperature: -20 °C~60 °C

FUNCTION

1. It will beep to warn you of any dangerous condition by beeping when signal from the transmitter is out of its safety range and/or the transmitter power is shut off before switching off the power supply to the receiver.
2. It will also be helpful for checking the signal range of the transmitter.
3. It will automatically warn you by beeping when the power supply to the receiver and servos drops below its safety level(4.2Volts).
4. It will help you to find a missing model after lost of control by shrieking.

ADJUSTMENT

1. Please install the Be-Found between the receiver(any channel) and the servo like an extension wire.
2. Under safety and normal condition, the LED indicator will light on and the beeper will be still.
3. It will shriek when the receiver loses the radio signal and/or the power supply becomes lower than 4.2 volts while the LED indicator is flashing on and off periodically. You can adjust an interval of beep by turning the beep interval adjustment.
4. If the LED indicator may flash with no interval or irregularly, it indicates the Be-Found is performing under improper conditions. You need to check the capacity and/or voltage of your battery pack.
